

Client kickoff — concept clarification

Date	Thursday, 7 August 2026	Time	10:00 AM (IST)
Mode	Online — Google Meet	Prepared by	Vishal Patel (Group 6)
Project	AI Literacy Studio (working title)	Course	ET 617 · CET, IIT Bombay

CLIENT

Prof. Ramkumar Rajendran
(Client)

TEAM (GROUP 6)

Vishal Patel

Ashok Kumar

Raghuram Gundi

ABSENT

Darshan Sonawane

Agenda

- Understand and align on the project concept (“AI Literacy Studio”).
- Clarify the target users and the scope of “AI literacy”.
- Discuss AI/API usage and the cost model.
- Content ownership and next steps.

Discussion & Key Points

- The team presented the concept: a self-paced platform that takes school teachers from knowing about AI to actually using it in class, across four modules — (1) how LLMs work, (2) practising prompt writing, (3) building a reusable AI assistant (Gem) for a recurring task, and (4) using AI on their own syllabus/worksheets to create quizzes and study guides.
- Key differentiator vs a workshop: built-in feedback — each prompt is scored against a visible rubric, the system shows what is missing and a stronger version side-by-side, and a learner cannot advance until the work is actually done.
- The client aligned with the concept and stressed that teachers are beginners who do not know tools like Gemini, NotebookLM or Gems; they must be taught to write and test prompts and to use NotebookLM/Gems for curriculum, assessment, slides and flashcards.
- Prompt teaching should use a structured framework (e.g., CRAFT / ABC) with teacher-relevant example prompts — such as differentiating instruction or testing student knowledge on a topic against Bloom’s levels.
- Main challenge raised: the team cannot fund LLM tokens for all users, and needs a way to observe that teachers are genuinely doing the work.

Decisions

- Each teacher connects their own free Gemini API key at sign-up; all AI usage runs on the teacher’s key, so the team bears no token cost.
- API-key creation is taught as the first step; it is made explicit that the key is used locally and is **not** stored in the system (clear privacy messaging).
- The client provides the learning content (what to teach); the team produces the learning material (slides / simple videos).
- Avoid copyright issues: do not download or re-host YouTube; if used, embed the video via a YouTube iframe directly.

Action Items

#	Action	Owner	Target
1	Decide the product / group project name	Team	Before next meeting
2	Prepare the High-Level Design (HLD) document	Team	Next
3	Share the HLD template and content details	Client	—
4	Post any questions in the WhatsApp group	Team	Ongoing

Next steps: Once the HLD is ready it will be signed (contract); deliverables to be reviewed every two weeks.
