Agenda

- Weekly status update.
- Review Module 1 scope, user flow, wireframe, data model and architecture.
- Decide the learning-content direction.

Discussion & Key Points

- The client noted that the current HLD is not yet at the expected standard and needs revision.
- Team (Darshan) presented the Module 1 scope: Identity & Access (sign-in, profile, onboarding, roles); a learning pathway (video + transcript, navigation); assessment & progress (auto-graded quizzes with explanations, progress bar, unlock/gating on passing). The team also walked through a proposed data model, architecture and testing approach.
- Flow shown: sign-in → onboarding → dashboard → lesson → quiz → pass unlocks the next item / fail returns to retry. Current screens are an AI-generated wireframe placeholder; proper UI/UX design will follow.
- Proposed three modules: (1) Foundation & Learning Core (no AI — sign-in, basic videos, assessments); (2) AI (prompt practice, AI workflow); (3) Certification & Admin (admin reports). Learning content still to be decided.
- Client guidance on content & pedagogy: on joining, interactively introduce “what is AI” at a high level (not detailed NLP) and ask which AI tools they have used (selectable options, e.g., ChatGPT) — interactive, not a video-quiz. Teach prompting for the teacher persona using a framework (LEARN-LM / CRAFT): give a scenario, the teacher writes a prompt, and the system evaluates whether it covers the role of the AI, the role of the learner, the expected outcome and the output format, giving feedback on what is missing; provide many scenarios (email to parents, assessment, curriculum).
- Next, teach Gems (wrapper + RAG) — teachers create and test, and their mistakes are collected; then showcase NotebookLM (the first activities can stop there).
- Content sourcing: reuse Creative-Commons 4.0 material where available, otherwise embed YouTube via iframe (no re-hosting). For the first two activities the checks can run without an LLM (basic NLP models such as BERT to check CRAFT roles); asking teachers for their own API key can be deferred to later (made clear it is not stored/used elsewhere).

Decisions

- Adopt LEARN-LM/CRAFT-based interactive prompt-practice with automated feedback as the core of the early content.
- Keep API-key entry out of the first version; use lightweight / no-LLM checks initially.
- Module titles and content to be decided by the team (client to assist).

Action Items

#	Action	Owner	Target
1	Meet during the week and define next week’s plan/deliverables; include it in this week’s MoM so the client knows what to expect	Team	This week
2	Maintain ~12 hrs/week (3 hrs × 4); meet at least once every two days (~30 min)	Team	Ongoing

3	Firm up Module 1 learning content (prompting via LEARN-LM, then Gems)	Team	Next week
---	---	------	-----------

Next steps: Present the agreed next-week deliverables at the next meeting.
