PromptShala
CODE YOUR BRIGHTER TOMORROW.

Practical AI literacy for everyday teaching.

Learn. Try. Check. Improve. Keep the teacher in control.

Client: Centre for Educational Technology, IIT Bombay
Darshan Sonawane · Vishal Patel · Ashok Kumar · Raghuram Gundi

TRY IT IN YOUR BROWSER

01 The client problem

Workshops introduce AI. Teachers still need guided practice to turn it into responsible classroom work.

The brief: four self-paced modules, formative feedback, reusable teaching workflows, saved progress and evidence of completion.

02 Designing for Meera

A beginner science teacher, Classes 5–10. A phone or shared laptop. Short learning windows. Limited technical confidence.

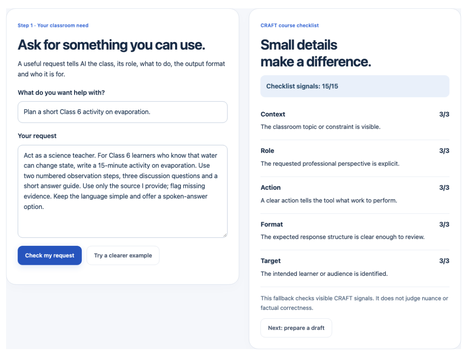

Design consequences: familiar classroom language, short steps, editable examples, visible feedback, accessible navigation and account isolation.

03 How the design became a working learning experience

Understand — Client brief + persona → Design — Authentic teaching tasks → Build — Four guided modules → Review — Feedback + iteration → Verify — Tests; client UAT next

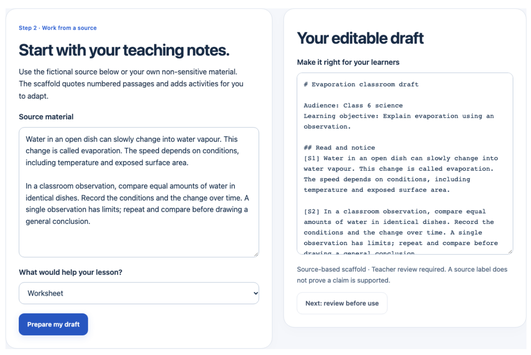

Pedagogy: explain an idea; practise a classroom task; get formative feedback; revise; transfer to a new context.

04 A visitor can independently try the core learning loop

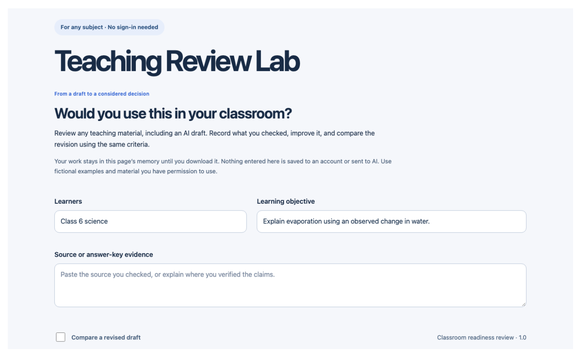

1. Make the request clearer

CRAFT checklist feedback supports deliberate revision.

2. Work from your own material

Numbered passages connect an editable scaffold to its source.

3. Check before classroom use

Human evidence ratings, essential checks and revision comparison.

Screens show genuine browser interactions with fictional sample material. Public practice is local; full cloud learning and live AI require an account.

05 Client feedback changed the product

Too much technical language	→	Task-based names, plain-language home page, shorter guided steps.
Understand existing AI use	→	Optional tools, frequency, confidence and teaching-goal questions.
Let teachers use their own Gemini key	→	One optional connection; tab-memory key, no database storage.
Save crafted requests	→	Private prompt + feedback history, reuse, account export and deletion.

06 Current status & evidence

4 modules · 29 lessons · 75 questions

Working course: saved learning, trusted quizzes, prompt practice, helpers, source tools, certificates and staff authoring.

435 tests passed; 27 browser journeys (Chromium, WebKit, 360px). Keyboard + accessibility smoke; full audit pending.
Client UAT and teacher field study pending.

07 Implementation & wider use

Deployed web app: Next.js + Supabase + optional server-side Gemini. Responsive access, private records and versioned assessment evidence.

Beyond this client: the Teaching Review Lab accepts portable rubrics for other subjects and teacher-development programmes.

Next: client UAT, operational recovery checks, real classroom study, and institution-approved curriculum and retention policies.
