PromptShala

ET617 / GROUP 6 / IIT BOMBAY

Helping teachers use AI in class.

A guided learning platform for writing better requests, creating teaching materials and checking AI answers.

4 modules **29** lessons **75** questions

ONE CLASSROOM IDEA. A CLEARER PATH.

A TEACHER'S STARTING POINT
Explain evaporation.

A MORE USEFUL REQUEST
Plan a 15-minute Class 6 activity.

THE TEACHER REVIEWS
Check. Adapt. Use in class.

From workshops to practice

Knowing about AI is only the start. Teachers need guided practice to ask useful questions and judge what belongs in a lesson.

The client asked for self-paced learning, classroom tasks and progress teachers can return to.

A teacher like Meera

Learner persona · Classes 5-10 · New to AI

Busy school day	→	Short, guided lessons
Limited AI experience	→	Familiar classroom examples
Phone or shared laptop	→	Simple screens; saved progress

01 Ask for something useful

Ask for something you can use.

A useful request tells AI the class, its role, what to do, the output format and who it is for.

What do you want help with?

Plan a short Class 6 activity on evaporation.

Your request

Act as a science teacher. For Class 6 learners who know that water can change state, write a 15-minute activity on evaporation. Use two numbered observation steps, three discussion questions and a short answer guide. Use only the source I provide; flag missing information. Keep the language simple and offer a spoken-answer option.

Check my request | Try a clearer example

Small details make a difference.

CRAFT course checklist

Checklist signals: 15/15

Context	3/3
The classroom topic or constraint is visible.	
Role	3/3
The requested professional perspective is explicit.	
Action	3/3
A clear action tells the tool what work to perform.	
Format	3/3
The expected response structure is clear enough to review.	
Target	3/3
The intended learner or audience is identified.	

This fallback checks visible CRAFT signals. It does not judge nuance or factual correctness.

Next: prepare a draft

CRAFT guides the context, role, action, format and audience.

02 Turn notes into a draft

Start with your teaching notes.

Use the fictional source below or your own non-sensitive material. The scaffold quotes numbered passages and adds activities for you to adapt.

Source material

Water in an open dish can slowly change into water vapour. This change is called evaporation. The speed depends on conditions, including temperature and exposed surface area.

In a classroom observation, compare equal amounts of water in identical dishes. Record the conditions and the change over time. A single observation has limits; repeat and compare before drawing a general conclusion.

What would help your lesson?

Worksheet

Prepare my draft

Your editable draft

Make it right for your learners

```
# Evaporation classroom draft

Audience: Class 6 science
Learning objective: Explain evaporation using an
observation.

## Read and notice
[S1] Water in an open dish can slowly change into
water vapour. This change is called evaporation.
The speed depends on conditions, including
temperature and exposed surface area.

[S2] In a classroom observation, compare equal
amounts of water in identical dishes. Record the
conditions and the change over time. A single
observation has limits; repeat and compare before
drawing a general conclusion.
```

Source-based scaffold · Teacher review required. A source label does not prove a claim is supported.

Next: review before use

03 Review before classroom use

Check accuracy and learner fit.
Compare revisions in Teaching Review Lab.

You asked. We simplified.

FROM CLIENT FEEDBACK

01 Simpler language
Clearer names, classroom examples and obvious next steps.

02 A personal starting point
Onboarding asks about AI tools, confidence and teaching goals.

03 Use your own Gemini key
An optional connection. The key stays in the open tab.

04 Keep useful work
Private prompts and feedback, saved for the next sign-in.

Ready to explore

A deployed web course with saved prompts, progress checks, certificates and staff tools. Live AI verification is pending.

Next: test, refine and adapt

Teacher trials, curriculum review and accessibility checks.
Reusable Review Lab rubrics support other subjects and programmes.
